RISKS AGAINST THE PPE IT IS INTENDED TO PROTECT:

EN 13034:2005 +A1:2009	Type 6 is intended to be used for exposure to a light spray, liquid aerosols or low pressure, low volume splashes, against which a complete liquid permeation barrier is not required i.e. when wearers are able to take timely adequate action when their clothing is contaminated. Type 6 protective clothing form the lowest level of chemical protection and are intended to protect from a potential exposure to small quantities of spray or accidental low volume splashes
EN ISO 13982-1:2004 +A1 :2010	Type 5 is intended to be used for risks of exposure to chemical products resistant to the penetration of solid particles dispersed in the air for the entire trunk
EN ISO 14126:2003 +AC :2004	is intended to be used for protection against exposure to infective agents
EN 1073-2 :2002	is intended to be used for protection against risks of exposure to particulate radioactive contamination
EN 1149-5:2008	is intended to be used for electrostatic dissipative protective clothing to protect against incendiary discharges.

LIMITATIONS: Exposition to certain chemicals or high concentrations may require higher barrier properties, either in terms of the performances of material or in the construction of the suit. Such areas can be protected by garments in type 1 to type 3. The user shall be the sole judge of the suitability for the type of protection required and the corrected combinations of coveralls and additional equipment.
